Our Commitment to Quality and Standards

You should be able to look at an Overt label and understand what we chose, why it's there and how we assess its quality.

How we source

We choose ethically sourced ingredients. For botanicals, that means naming the plant and the part we use, along with the extract or form when it matters.

How we test

Our quality standard calls for independent laboratory testing of our supplements. We look at ingredient identity and purity, and check for relevant contaminants.

How we make our supplements

Current Good Manufacturing Practice (cGMP) requirements guide our manufacturing and quality controls, from the ingredients we receive to the finished supplement.

What we share

Our labels name the ingredients. Our guide explains their roles and links to the published studies, so you can see what researchers tested and where questions remain.

Our story

OVERT began with a simple idea: build a supplement company you can trust. That means being open about our ingredients, methods and sources, consistent in our quality, and guided by current science. We select high-quality, ethically sourced ingredients and make independent third-party testing of every ingredient part of our process. The details behind our products should be yours to see.

You deserve clear, honest information about what is in your supplement and why it is there. In an industry crowded with proprietary blends and ambitious promises, we believe trust starts with a label you can understand and evidence you can examine. We share our sources, explain our choices and keep learning as the science evolves.

Our products are manufactured under current Good Manufacturing Practice (cGMP) requirements, with published research informing our ingredient and dose choices. We bring that same care to the information we share, so you can make informed decisions about what you take.

Hovenia dulcis extract

SELECTED RESEARCH + INGREDIENT REFERENCES

READING THE EVIDENCE

Findings are preliminary and specific to the tested extracts, doses and participants. These studies do not establish that OVERT prevents hangovers or protects against alcohol-related harm.

01 HUMAN RANDOMIZED CROSSOVER TRIAL

Kim H, Kim YJ, Jeong HY, et al. A standardized extract of the fruit of Hovenia dulcis alleviated alcohol-induced hangover in healthy subjects with heterozygous ALDH2: a randomized, controlled, crossover trial. Journal of Ethnopharmacology. 2017;209:167-174.

Twenty-six men with a specific ALDH2 genotype received 2,460 mg fruit extract or placebo with alcohol. Some later symptom measures favoured the extract; peak alcohol and acetaldehyde measures did not differ between groups.

Hovenia dulcis extract

BOTANICAL EXTRACT

WHAT IT IS

Hovenia dulcis is a fruiting tree with a long history in East Asian botanical traditions. This profile describes its fruit extract.

WHY IT'S HERE

Hovenia fruit extracts contain plant compounds investigated for antioxidant activity and inflammatory responses. Human evidence is limited to small, extract-specific studies; it does not establish a consistent recovery benefit or protection from alcohol.

THE SHORT VERSION

Potential antioxidant activity; meaningful human benefits remain uncertain.

OUR QUALITY STANDARD

Every OVERT ingredient undergoes rigorous testing and inspection. Our in-house experts assess and select each batch before approving it for use. Independent third-party testing complements this first stage of our quality process.

L-Cysteine

AMINO ACID

WHAT IT IS

L-Cysteine is a sulfur-containing amino acid found naturally in protein-rich foods and in the body.

WHY IT'S HERE

Cysteine is a building block for proteins and for the antioxidant glutathione. These are normal biochemical roles; taking extra L-cysteine has not consistently improved recovery-related symptoms in the small human studies available.

THE SHORT VERSION

Supports protein building and the body's glutathione antioxidant system.

Opuntia ficus-indica extract

SELECTED RESEARCH + INGREDIENT REFERENCES

Opuntia ficus-indica extract

BOTANICAL EXTRACT

WHAT IT IS

Opuntia ficus-indica is the prickly pear cactus. Its fruit and pads have a vivid culinary and botanical heritage.

WHY IT'S HERE

Prickly pear contains betalains and other plant compounds studied for antioxidant effects. Human research uses particular fruit foods or extracts; those findings cannot be assumed to apply to every preparation or predict recovery benefits.

THE SHORT VERSION

Potential antioxidant effects, with evidence specific to the preparation studied.

Nicotinamide riboside chloride

SELECTED RESEARCH + INGREDIENT REFERENCES

READING THE EVIDENCE

NR chloride has human data on NAD-related biomarkers and short-term tolerability. Biomarker increases do not establish longevity, hangover prevention, jet-lag relief or benefits for the finished formula.

Nicotinamide riboside chloride

VITAMIN B3 FORM

WHAT IT IS

Nicotinamide riboside is a specific form of vitamin B3. We state the form in full so the label is easy to understand and compare.

WHY IT'S HERE

NR helps the body make NAD, a coenzyme needed for normal cellular energy metabolism. Human trials show increased NAD-related measures, but this has not established extra energy, longevity or a predictable everyday benefit.

THE SHORT VERSION

Supports NAD production; wider health benefits from supplementation remain unproven.

Zinc L-Carnosine

SELECTED RESEARCH + INGREDIENT REFERENCES

READING THE EVIDENCE

These small studies concern zinc-carnosine and experimental intestinal-permeability measures. They are not evidence that OVERT treats digestive disease or offsets alcohol-related damage.

Eight volunteers completed placebo, zinc-carnosine, colostrum and combined-treatment periods before strenuous exercise. Zinc-carnosine reduced the exercise-associated permeability rise after 14 days. The very small sample and specialised setting limit broader conclusions.

Zinc L-Carnosine

MINERAL COMPLEX

WHAT IT IS

Zinc L-Carnosine is a complex that combines zinc with the dipeptide L-carnosine.

WHY IT'S HERE

This complex has been studied for maintaining the intestinal barrier under experimental stress. Small human trials report changes in gut-permeability measures, but they do not establish broad digestive benefits or protection from alcohol-related injury.

THE SHORT VERSION

Potential intestinal-barrier support; human evidence remains limited.

Thiamine hydrochloride

VITAMIN B1

WHAT IT IS

Thiamine is vitamin B1, an essential nutrient. Thiamine hydrochloride is a stable, well-recognized supplemental form.

WHY IT'S HERE

Thiamine helps enzymes release energy from food and supports the normal function of cells. The hydrochloride form supplies vitamin B1; adequate intake meets a nutritional need, rather than acting as a stimulant or guaranteeing more energy.

THE SHORT VERSION

Supports normal energy metabolism and healthy cell function.

L-5-Methyltetrahydrofolate

FOLATE FORM

WHAT IT IS

L-5-Methyltetrahydrofolate, also known as 5-MTHF, is a bioactive form of folate. Daily specifies the glucosamine salt.

WHY IT'S HERE

5-MTHF supplies folate used in DNA synthesis, cell division and normal amino-acid metabolism. It is an active folate form, but that does not establish universal clinical superiority over folic acid or other folate preparations.

THE SHORT VERSION

Supports DNA synthesis, cell division and normal amino-acid metabolism.

Pyridoxal 5-Phosphate

READING THE EVIDENCE

Pyridoxal 5-phosphate is a vitamin B6 coenzyme form. Its biochemical role does not establish superior clinical outcomes, and capsule or tablet absorption results do not validate a powdered blend.

01 OFFICIAL NIH NUTRITION REFERENCE

Pyridoxal 5-Phosphate

VITAMIN B6 FORM

WHAT IT IS

Pyridoxal 5-Phosphate, often abbreviated P-5-P, is a coenzyme form of vitamin B6.

WHY IT'S HERE

Pyridoxal 5-phosphate participates in amino-acid metabolism and the production of neurotransmitters and haemoglobin. Supplying vitamin B6 supports these normal functions; its coenzyme form does not mean that supplementation improves mood, cognition or energy beyond nutritional needs.

THE SHORT VERSION

Supports amino-acid metabolism, neurotransmitter production and haemoglobin formation.

Sodium + Potassium

ELECTROLYTES

WHAT IT IS

Sodium and potassium are familiar minerals found in body fluids and everyday foods.

WHY IT'S HERE

Sodium and potassium help regulate fluid balance, transmit nerve signals and support normal muscle function. Replacing losses may be useful, but a drink's hydration effect depends on its mineral amounts, overall composition and your individual needs.

Allulose

SWEETNESS + BODY

WHAT IT IS

Allulose is a rare sugar found naturally in small amounts in foods such as figs and raisins.

WHY IT'S HERE

Allulose provides sweetness and body with substantially less energy than table sugar. Its main value is sensory: when replacing sugar, it can reduce the sugar and calorie contribution without establishing a weight-management or metabolic benefit.

THE SHORT VERSION

Adds sweetness and body with fewer calories than sugar.

Citric acid + Malic acid

BRIGHTNESS + BALANCE

WHAT IT IS

Citric and malic acids provide tartness. The formulas specify anhydrous citric acid; Daily also specifies DL-malic acid.

WHY IT'S HERE

These food acids add tartness and help balance sweetness, giving fruit flavours a brighter finish. They can also contribute to acidity control; the actual pH and stability depend on the complete recipe and preparation.

THE SHORT VERSION

Adds bright tartness that balances sweetness and lifts fruit flavour.

Natural citrus-ginger flavour

FLAVOUR PROFILE

WHAT IT IS

Citrus-ginger flavour brings together bright citrus notes and a lightly warming ginger character.

WHY IT'S HERE

Citrus and ginger notes add aroma, brightness and a gently warming character, helping balance the drink's different tastes. This is a flavour benefit; it does not establish the health effects reported for measured ginger supplements.

Steviol glycosides

STEVIOL-GLYCOSIDE SWEETNESS

WHAT IT IS

Steviol glycosides are sweet-tasting compounds found in stevia leaves. Commercial production methods vary by ingredient.

WHY IT'S HERE

Steviol glycosides provide intense sweetness in very small amounts, helping balance acidity without the bulk of sugar. Their sensory role can support a lower-sugar recipe, but does not establish a metabolic or blood-sugar benefit.

THE SHORT VERSION

Balances tartness with concentrated sweetness in very small amounts.

Bitter-blocking flavour modifier

TASTE BALANCE

WHAT IT IS

Some functional ingredients bring naturally assertive notes. This flavour component is used to keep the finished drink balanced.

WHY IT'S HERE

A bitterness modifier is intended to soften assertive bitter notes from ingredients, making the drink's flavour easier to enjoy. Its effect depends on the selected preparation and recipe; it does not remove nutrients or establish a health benefit.

Helps soften bitterness and make the overall flavour more balanced.

Xanthan gum

TEXTURE

WHAT IT IS

Xanthan gum is a fermentation-derived ingredient used in very small amounts for texture.

WHY IT'S HERE

Xanthan gum thickens water and can help keep suspended ingredients distributed, giving a drink a more cohesive texture and mouthfeel. The result depends on concentration and mixing; a small textural amount does not establish a meaningful fibre benefit.

THE SHORT VERSION

Helps create a smoother texture and keep ingredients suspended.

Silicon dioxide

FLOW AGENT

WHAT IT IS

Silicon dioxide is an anticaking agent commonly used in powdered foods and supplements.

WHY IT'S HERE

Silicon dioxide helps reduce caking and keeps dry powders flowing more freely, making portioning and dispensing easier. Its role is physical powder handling; it does not make every ingredient dissolve or provide a demonstrated health benefit.

THE SHORT VERSION

Helps reduce caking and keep dry powder flowing freely.

Glucose

CARBOHYDRATE

WHAT IT IS

Glucose is a carbohydrate found naturally in many foods.

WHY IT'S HERE

Glucose provides digestible carbohydrate that the body can use for energy, while adding sweetness and body. Its practical value depends on the amount used; sharing glucose with oral rehydration formulas does not make a drink medically equivalent.

Sodium, Potassium + Chloride

ELECTROLYTES

WHAT IT IS

Sodium, potassium and chloride are minerals naturally present in body fluids. Daily and Recovery supply them through sodium chloride and potassium chloride.

WHY IT'S HERE

Together, these electrolytes help maintain normal fluid balance and support nerve and muscle function. Chloride is also part of stomach juices used in digestion. Their usefulness depends on intake, losses and the amounts in a serving.

Magnesium citrate

MINERAL FORM

WHAT IT IS

Magnesium citrate combines magnesium with citric acid. No Jet Lag Day specifies the tribasic anhydrous form.

WHY IT'S HERE

Magnesium contributes to normal muscle and nerve function, energy metabolism and electrolyte balance. Citrate supplies an absorbable magnesium form; better absorption in a particular comparison does not establish better sleep, faster recovery or superior performance.

L-Glutathione, reduced

TRIPEPTIDE

WHAT IT IS

Glutathione is a small compound made from three amino acids and naturally present in the body.

WHY IT'S HERE

Glutathione helps cells manage oxidation and maintain normal redox balance. Oral supplementation has increased body stores in some human trials, while others found no clear change; higher measured stores do not establish a noticeable recovery benefit.

THE SHORT VERSION

Supports cellular antioxidant systems; supplementation benefits remain uncertain.

Silybin-phosphatidylcholine complex

BOTANICAL COMPLEX

WHAT IT IS

Silybin is a naturally occurring constituent of milk thistle. Here, it is paired with phosphatidylcholine in a named complex.

WHY IT'S HERE

TASTE + MIXABILITY

WHAT IT IS

A flavour and processing system brings together flavour notes, food acids and practical powder-handling ingredients.

WHY IT'S HERE

Nicotinamide mononucleotide

NAD PRECURSOR

WHAT IT IS

NMN stands for nicotinamide mononucleotide, a molecule the body uses to make NAD. NAD is a coenzyme involved in cellular metabolism, and NMN is one of its precursors. No Jet Lag Night specifies beta-NMN.

WHY IT'S HERE

NMN is studied for its ability to raise NAD, a coenzyme involved in cellular energy metabolism. Small human trials report higher blood NAD levels, but this does not establish longevity or everyday performance benefits.

VITAMIN

WHAT IT IS

Cholecalciferol is vitamin D3, a fat-soluble vitamin. Lichen-derived identifies the source selected for this ingredient: a defined vitamin D3 material sourced from lichen, rather than a serving of whole lichen.

WHY IT'S HERE

Purple carrot juice powder

PLANT-DERIVED COLOUR

WHAT IT IS

Purple-carrot juice concentrate powder contains naturally occurring anthocyanin pigments that can give foods and prepared drinks a red-violet colour.

WHY IT'S HERE

Anthocyanin pigments provide a plant-derived red-violet colour, making a prepared drink look more vivid and appealing. Their visual effect is the relevant benefit here; a colouring amount does not establish an antioxidant benefit.

THE SHORT VERSION

Adds a vivid red-violet colour from naturally occurring purple-carrot pigments.

Monk fruit extract

SWEETNESS

WHAT IT IS

Monk fruit, also called luo han guo, contains sweet compounds known as mogrosides. The extract concentrates those compounds into an ingredient useful for sweetness in small amounts.

WHY IT'S HERE

Mogrosides give strong sweetness in small quantities, helping soften sour or bitter tastes without needing the bulk of table sugar. The useful benefit is a more balanced flavour and a pleasantly sweet finish.

THE SHORT VERSION

Adds concentrated sweetness to balance tartness and improve the drinking experience.

Low-methoxyl citrus pectin

SELECTED RESEARCH + INGREDIENT REFERENCES

READING THE EVIDENCE

Low-methoxyl citrus pectin

TEXTURE + DISPERSION

WHAT IT IS

Pectin is a plant polysaccharide commonly obtained from citrus peel. The low-methoxyl form has structural features that affect how it thickens and interacts with minerals.

WHY IT'S HERE

Pectin binds water and can add gentle body, helping a mixed drink feel smoother and more cohesive. Its texture effect depends on concentration, acidity and minerals; this role is distinct from higher-dose dietary-fibre benefits.

THE SHORT VERSION

Helps give a mixed drink smoother texture and more body.

Thaumatin

TASTE MODIFIER

WHAT IT IS

Thaumatin is a sweet-tasting protein used in foods for sweetness and flavour modification. Its name identifies the protein, while its precise production source depends on the supplier.

WHY IT'S HERE

Thaumatin can enhance sweetness and modify lingering taste, helping round out bitter or uneven notes. Because it is intensely sweet, small quantities can make a useful sensory contribution without adding the bulk of sugar.

THE SHORT VERSION

Rounds out sweetness and helps soften unwanted taste notes.

Rebaudioside M

SWEETNESS

WHAT IT IS

Rebaudioside M, usually shortened to Reb-M, is a sweet-tasting member of the steviol-glycoside family. Naming it precisely distinguishes the selected compound from the broader label stevia.

WHY IT'S HERE

Reb-M provides intense sweetness in small quantities, helping balance sourness and make a drink more enjoyable without the bulk of sugar. Its role is sensory: a sweet finishing note that rounds out the overall taste.

Bitter-blocking and sweetness-enhancing flavour

FLAVOUR BALANCE

WHAT IT IS

This is a natural flavour preparation designed to reduce perceived bitterness and enhance perceived sweetness. Its exact components depend on the selected preparation.

WHY IT'S HERE

Taste-modifying flavours are used to reduce perceived bitterness and strengthen the impression of sweetness. They can make assertive tastes easier to enjoy and help the flavour feel more balanced from first sip to finish.

THE SHORT VERSION

Softens bitterness and makes sweetness feel more balanced.

BOTANICAL EXTRACT

WHAT IT IS

Ginger rhizome extract standardized to 5% total gingerols contains a measured proportion of these characteristic compounds. This percentage describes the extract's composition, not the amount of raw ginger used to make it.

Melatonin

SLEEP-WAKE SIGNAL

WHAT IT IS

Melatonin is a hormone involved in the body's sleep-wake rhythm, with natural production rising in darkness. Fast-release describes a preparation intended to make it available promptly, rather than extending its release.

WHY IT'S HERE

Melatonin helps signal biological night and may support sleep onset and adjustment of sleep-wake timing. Effects depend on when it is taken; it can cause drowsiness, so timing and product directions matter.

Turmeric and beta-carotene are documented alternative colours for No Jet Lag DAY, not a direction to add both. The turmeric role is visual; trials of concentrated curcumin supplements do not validate a small colour ingredient or this product.

01 OFFICIAL COLOUR-INGREDIENT IDENTITY SPECIFICATION

U.S. Food and Drug Administration. Turmeric, 21 CFR 73.600. eCFR.

Identifies turmeric colour with the ground rhizome of Curcuma longa and sets food-use conditions. It supports the colour category, without equating it with a concentrated curcumin preparation or establishing anti-inflammatory or other clinical effects.

Turmeric colour

COLOUR OPTION

WHAT IT IS

Turmeric comes from the rhizome of Curcuma longa, the familiar golden-yellow spice. As a colour ingredient, its role is to contribute a yellow tone to the finished serving.

WHY IT'S HERE

Turmeric provides a warm golden-yellow colour, giving a prepared drink a brighter, more vivid appearance. Its benefit at a colouring amount is visual; it should not be equated with a concentrated curcumin supplement.

THE SHORT VERSION

Adds a warm golden colour for a brighter-looking drink.

Beta-carotene colour

SELECTED RESEARCH + INGREDIENT REFERENCES

READING THE EVIDENCE

Beta-carotene is an alternative to turmeric for DAY colour. The active pigment amount in the proposed colour preparation is not established here. High-dose supplement safety findings must be kept specific to dose and population; they neither establish risk nor prove safety at an unspecified colour exposure.

01 OFFICIAL COLOUR-INGREDIENT IDENTITY SPECIFICATION

U.S. Food and Drug Administration. Beta-carotene, 21 CFR 73.95. eCFR.

Describes beta-carotene colour and food-use conditions. It supports the pigment's identity and visual role, without identifying the supplier's carrier system, confirming an active pigment dose or making a nutritional or medical claim for the finished serving.

02 PRIMARY RANDOMIZED HIGH-DOSE SAFETY TRIAL; INDIRECT RELEVANCE

Alpha-Tocopherol, Beta Carotene Cancer Prevention Study Group. The effect of vitamin E and beta carotene on the incidence of lung cancer and other cancers in male smokers. New England Journal of Medicine. 1994;330(15):1029-1035.

Among 29,133 male smokers, 20 mg beta-carotene daily for five to eight years increased lung-cancer incidence. This high-dose, long-duration population-specific finding is important safety context, but was not a test of the amount in a colour preparation.

Beta-carotene colour

COLOUR OPTION

WHAT IT IS

Beta-carotene is a carotenoid pigment used to give foods yellow-to-orange colour. Its name identifies the colouring compound, while the complete preparation depends on the selected supplier.

WHY IT'S HERE

Beta-carotene gives foods and drinks a yellow-to-orange hue, helping create a brighter, more inviting appearance. At the small, unspecified colouring amount, its relevant benefit is visual rather than an established vitamin A contribution.

THE SHORT VERSION

Adds a warm yellow-orange hue that complements bright fruit flavours.

Maltodextrin

SELECTED RESEARCH + INGREDIENT REFERENCES

READING THE EVIDENCE

Maltodextrin is a carrier in No Jet Lag formulas, including the melatonin premix and NMN-free EU Night variant. Its source plant depends on the selected preparation.

01 OFFICIAL CARBOHYDRATE IDENTITY SPECIFICATION

U.S. Food and Drug Administration. Maltodextrin, 21 CFR 184.1444. eCFR.

Defines maltodextrin as a starch-derived glucose polymer with a specified dextrose-equivalent range. It supports the carrier's identity and distinguishes it from intact starch, while not determining which crop or supplier preparation is used in this blend.

Maltodextrin

CARRIER + BODY

WHAT IT IS

Maltodextrin is a starch-derived carbohydrate powder used in dry ingredient systems. It provides a practical material through which small quantities of other ingredients can be distributed.

WHY IT'S HERE

Maltodextrin provides a dispersible carbohydrate base for carrying small quantities of other ingredients. Its practical value is easier ingredient handling and blending; any effect on body or mouthfeel depends on the amount used.

THE SHORT VERSION

Helps carry small ingredient quantities and make powders easier to handle.
